

CardBus / PCMCIA Card

fireLINE™ 1394 CardBus/PCMCIA Installation Guide

Before you get started...

The Evergreen fireLINE™ 1394 CardBus/PCMCIA Card upgrade kits contains everything needed to install the device.

The kit includes:

- ? fireLINE™ 1394 CardBus/PCMCIA Card
- ? fireLINE™ 1394 CardBus/PCMCIA Card Installation Guide
- ? fireLINE™ Product Warranty Card
- ? fireLINE™ 1394 CardBus/PCMCIA Card Host Adapter Driver Diskette
- ? Bonus software CD

1. Read entire installation guide before proceeding.

Gather the following items for installation:

- ? fireLINE™ 1394 CardBus/PCMCIA Card
- ? fireLINE™ 1394 CardBus/PCMCIA Card Host Adapter Driver Diskette
- ? Windows® Drivers CD
- ? System Manual

2. Install device drivers.

Insert the driver disk into your floppy drive. From the start menu, select RUN, and type “a:\setup” in the dialogue box that appears. Click “OK.” The install program will guide you through the driver installation process.

Note: If you are prompted that “A file being copied is older than the file currently on your computer,” click “Yes” to keep the original file in place. This prompt may appear more than once. Select “Yes” each time it appears during the driver installation.

3. Restart your machine.

After the driver installation is done, restart your machine.

4. Install fireLINE™ 1394 CardBus/PCMCIA Card.

Locate an unused cardbus slot. Verify correct alignment and insert card firmly.

Note: The orientation is very important. Be sure the gold strip is inserted first.

5. Check the installation.

Check to see if the fireLINE™ 1394 CardBus/PCMCIA Card and its device driver are correctly installed. You should see the item “Texas Instruments OHCI Compliant IEEE 1394 Host Controller” in you Device Manager under Controllers. A yellow or red symbol beside the controller entry may indicate an issue. If present, review all installation steps. If the symbols remain, contact our Customer Care Center for technical assistance.
